WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No. PCT/NL2004/000724

_						
	Box N	o. I Basis of the opinion				
1.	With rethe lar	With regard to the language, this opinion has been established on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.				
	la	nis opinion has been established on the basis of a translation from the original language into the following nguage , which is the language of a translation furnished for the purposes of international search nder Rules 12.3 and 23.1(b)).				
2.	With reneces	egard to any nucleotide and/or amino acid sequence disclosed in the international application and sary to the claimed invention, this opinion has been established on the basis of:				
a. type of material:						
		a sequence listing				
		table(s) related to the sequence listing				
	b. format of material:					
		in written format				
		in computer readable form				
	c. time of filing/furnishing:					
		contained in the international application as filed.				
		filed together with the international application in computer readable form.				
		furnished subsequently to this Authority for the purposes of search.				
3.	ha co	addition, in the case that more than one version or copy of a sequence listing and/or table relating thereto is been filed or furnished, the required statements that the information in the subsequent or additional pies is identical to that in the application as filed or does not go beyond the application as filed, as propriate, were furnished.				
4.	Additional comments:

Box No. VII Certain defects in the international application

The following defects in the form or contents of the international application have been noted:

see separate sheet

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

see separate sheet

Re Item V.

1. Reference is made to the following documents:

D1: US-A-5536344 D2: JP-A-54101878 D3: DE-U-20105550

2. The following is stated under reference to Item VIII of this written opinion. It is to be noted, that those features, which cause non-compliance with Article 6 PCT, cannot be employed for unambiguously distinguishing over prior art for assessing novelty in the sense of Article 33(2) PCT or inventive step in the sense of Article 33(3) PCT.

Document D1, cf. claim 7 in conjunction with column 3, lines 5 - 11, discloses a method for arranging a thermoplastic insert unit (2) comprising a body (8) in a thermoplastic sandwich product (4) having at least one planar or substantially planar section (14), which sandwich product (4) comprises a layer of a core material (18) which does not have its theoretical maximum density and at least one covering layer formed from a fibre reinforced thermoplastic (cf. col. 3, lines 6, 7), the method comprising the steps of

forming a hole in the covering layer (14) of the thermoplastic sandwich product (4), with core material (18) being removed;

placing the plastic insert unit (2) in the hole;

positioning the insert unit in an apparatus;

applying energy and pressure, so that heat is generated between the plastic insert unit (2) and the covering layer (14) of the thermoplastic sandwich product; and fixing the insert unit through cooling after sufficient heat has been generated to allow fusion (cf. figure 6) between the plastic insert unit and the covering layer of the thermoplastic sandwich product.

The subject-matter of claim 1 differs therefrom in that the core material is thermoplastic, the positioning is between an ultrasonic horn and an anvil and the

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY (SEPARATE SHEET)

PCT/NL2004/000724

energy is applied ultrasonically.

Therefore the subject-matter of claim 1 for as far as can be understood is novel and claim 1 meets the requirements of Article 33(2) PCT.

Since the weight is not a feature of claim 1 and commercial success as such cannot be indicative to the presence of an inventive step, cf. PCT-Guideline, 13.18, the objective problem underlying claim 1 appears to lie in the avoiding of rotation, cf. page 1, lines 29 - 34.

However the combination of features consisting of a thermoplastic core material (7, 21), positioning an insert (6, 13) between an ultrasonic horn (3) and an anvil (8), whereby energy is applied ultrasonically, is as such known from document D2, cf. the Derwent abstract in conjunction with figures 1 - 3. Since both thermoplastic cored sandwich panels and ultrasonic welding of thermoplastics are generally known and commonly practised, the teaching of document D2 provides the skilled man a straightforward possibility of solving the aformentioned apparent objective underlying problem, which could be implemented in the method known from document D1 without the exercise of inventive skill.

Therefore the subject-matter of claim 1 for as far as can be understood is deprived of inventive step and claim 1 does not meet the requirements of Article 33(3) PCT. Consequently the present application does not meet the requirements of Article 33(1) PCT.

3. Due to the non-compliance with Article 6 PCT as set out under Item VIII herein below, whereby independent claim 1 does not meet the requirements of Article 33(3)PCT, the international searching authority can in this Written Opinion neither in reason identify nor select one or more additional features as contained by the dependent claims 2 - 11 as supporting the presence of an inventive step. For their disclosure in the prior art documents as such reference is made to the international search report.

Consequently claims 2 - 11 formally do not meet the requirements of Article 33(3) PCT.

4. Claims 1 - 11 meet the requirements of Article 33(4) PCT.

Re Item VII.

- 1. The independent claim is not presented in the two-part form in accordance with Rule 6.3(b) PCT, whereby the features known in combination from the closest prior art document D1 placed in its preamble (Rule 6.3(b)(i) PCT) and the remaining features in its characterising part (Rule 6.3(b)(ii) PCT).
- 2. The features of the claims are not provided with reference signs placed in parentheses (Rule 6.2(b) PCT).
- 3. Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in prior art documents D2 and D3 is not mentioned in the description, nor are these documents identified therein.

Re Item VIII.

In respect of the requirements of Article 6 PCT the following is observed.

1. The expressions "virtual planar section", cf. page 11, line 4 and "is not completely solid" are vague and leave the reader in doubt as to the meaning of the technical features to which they refer, thereby rendering the definition of the subject-matter of said claim 1 unclear, contrary to the requirements of Article 6 PCT. Taking the priority

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY (SEPARATE SHEET)

PCT/NL2004/000724

wording into consideration for the purpose of evaluating the claims in respect of Article 33(1) PCT these expressions have respectively been interpreted as "substantially planar section" and "does not have its theoretical maximum density".

- The method defined by independent claim 1 is comprised of the feature "with core material being removed". This method is further specified thru claim 7 as being comprised of the feature "in which no core material is removed". This further specification causes a serious inconsistency in the matter for which protection is sought, see also PCT-Guideline 5.15 in conjunction with Rule 6(4) PCT.
- 3. The expression "the dimensions of the hole are substantially equal to the dimensions of the body of the insert unit", cf. claim 4, is unclear, since it lacks delimitation over exact dimensions, cf. PCT-Guideline 5.38.
- 4. The additional features of claim 5 appear to define the subject-matter of claim 5 in terms of the result to be achieved, without mentioning those method features which are necessary for achieving this result, cf. PCT Guideline, 5.35. Consequently claim 5 lacks clarity.
- 5. Since it cannot be stated whether the content of bracketed expressions is part of the subject-matter of a claim, claim 6 formally lacks clarity, cf. PCT-Guideline 5.11.
